Topic : Does modern technology make life convenient

Video Link : <https://youtu.be/nXMLJBwOUyw?si=yb0gbEDQoZoxYJGB>

Abstract : Technology has transformed our lives by bringing speed, comfort, and access to activities which were time- and labor-intensive. From instant communication connecting individuals on various continents to banking over the internet, telemedicine, online learning, and voice-activated homes, technology has made the concept of convenience a lifestyle. It saves time, increases productivity, and provides greater safety solutions that were unimaginable beforehand. But the true potential of technology is not just the way it progresses, but also the way it is wisely utilized. Balanced against responsibility, modern technology doesn't just make life convenient—it makes life more intelligent, more effective, and more interconnected.
